PROFILE SUMMARY

AI Engineer and Generative AI Developer experienced in building LLM-powered applications, optimizing prompts, and designing **RAG** (Retrieval-Augmented Generation) pipelines over vector databases. Skilled in developing AI agents with **LangChain** and **LangGraph**, integrating OpenAI and LLM solutions with REST APIs, and shipping scalable **FastAPI** backend services in Python. Experienced in embedding-based semantic search, containerized deployment with Docker, and version-controlled development with Git & GitHub. Pursuing B.E. in CSE (CGPA: 8.2), targeting AI Engineer, LLM Engineer, and Generative AI roles.

EDUCATION

Neil Gogte Institute of Technology, Hyderabad, India — 2023 – 2027
B.E. in Computer Science Engineering — CGPA: 8.2
Sri Chaitanya Junior College, Hyderabad, India — 2021 – 2023
TS Intermediate (Class XII) — Aggregate: 91%
Bhashyam High School, Hyderabad, India — 2019 – 2021
TS SSC (Class X) — CGPA: 10

TECHNICAL SKILLS

Programming Languages: Python, Java
Python Libraries: LangChain, Pydantic
Python Frameworks: LangGraph, FastAPI
Databases: MySQL, Vector Databases
Modelling Techniques: Machine Learning, Deep Learning, NLP, Transformers

WORK EXPERIENCE

AskFirst, AI/ML Intern — 15/06/2026 – 09/07/2026 | Hyderabad, India

- Engineered **embedding-based retrieval pipelines** for a healthcare **RAG** system over a vector database, improving retrieval relevance for domain-specific queries.
- Optimized **LLM prompt formatting** by restructuring raw-string context into structured **MD/XML/YAML**, improving prompt parsing and response consistency.
- Developed a domain-specific healthcare chatbot with a custom **deterministic orchestrator** for query routing, including an escalation flow to **doctor-consultation booking**.

PROJECTS

Voice AI Agent — Source Code | Live Demo

- Built a full-stack, **voice-based AI application** using **FastAPI**, **Next.js**, and **Supabase/pgvector** that converts uploaded PDFs into spoken quizzes for active recall.
- Designed a **RAG pipeline** that feeds PDF text to the LLM to detect topic boundaries and page ranges, then chunks and embeds each topic-chunk with **pgvector** for embedding-based retrieval.
- Built a grader that transcribes spoken answers and scores them via **cosine similarity** against the reference (correct/partial/incorrect thresholds over keyword matching), with **adaptive scoring** that tracks per-topic accuracy and adjusts difficulty in real time.
- Deployed end-to-end (FastAPI on Render, Next.js on Vercel), delivering a live PDF-to-quiz pipeline with an average quiz completion time of **2.83 seconds**.

Citation Verification Engine — Source Code | Live Demo

- Engineered a deterministic legal AI safety engine in **Next.js/TypeScript** that extracts, normalizes, and verifies references across **6 Indian legal formats**, resolving **LLM hallucination** at runtime.
- Designed a **3-pass validation algorithm** using the **Indian Kanoon API** and Regex-based title matching to intercept fabricated references and auto-correct page/volume discrepancies.
- Implemented a **bounded concurrency queue** with 300 ms pacing and a database-driven caching layer, cutting external API calls by **75%** and achieving cache-hit latencies under **15 ms**.

ACADEMIC POSITIONS & LEADERSHIP

Class Representative — Oct 2024 - July 2025

- Served as primary student–faculty liaison; participated in a college Hackathon and hosted events as a Public Speaker.

Literary Club Representative — Sep 2023 - July 2025

- Represented the Literary Club by promoting **creative writing**, **public speaking**, and reading culture among students, and supporting the planning and hosting of club events and activities.
